SUMMARY

Computer science senior graduating December 2026, with IT experience since 2018 and three years supervising security in a data center. I build distributed systems, real-time data fusion pipelines and iOS apps in Python and Swift.

EDUCATION

Thomas Edison State University, Trenton, NJ · *B.S. in Computer Science* — Expected Dec 2026

Kean University, Union, NJ · *Computer science coursework, then transferred* — 2018 – 2020

PROJECTS

mini-s3 Python, FastAPI, Raft, consistent hashing — github.com/zz-kevin/mini-s3

- Built a replicated object store inspired by Amazon S3: consistent hashing across storage nodes, 3 copies of every object, write quorum of 2, and a repair worker that restores lost copies.
- Made metadata fault-tolerant with 3 Raft gateways; killing the leader under live traffic elects a new one in about 0.5 s.
- Wrote a chaos test that kills a node or the leader mid-traffic: 0 failed reads or writes and every object intact (SHA-256 verified); backed by 26 automated tests and a design doc.

Dark Track (capstone) Python, NumPy/SciPy, PostgreSQL, Leaflet — github.com/zz-kevin/dark-track

- Fused live ADS-B flight data from the OpenSky Network with a simulated radar feed into one tracked picture using Kalman filters and Hungarian-algorithm track association.
- Flags aircraft whose transponder goes silent while radar keeps tracking them, catching 93–98% of dropouts on held-out data with zero false alarms, at about 500 tracks in under 0.5 s.

Dark Wake Swift, SwiftUI, MapKit — github.com/zz-kevin/dark-wake

- Built an iPad and iPhone app that fuses live AIS ship data with simulated coastal radar to flag ships that switch AIS off.
- Caught 87 of 88 simulated dropouts with zero false alarms; on a real iPad over the Singapore Strait it caught an injected dropout within about a minute.

EXPERIENCE

Offinsoman Associations of Canada & USA — Bronx, NY

IT Consultant (Part-Time) — 2024 – Present

IT Intern — Summers 2018, 2020, 2022, 2024, 2026

- Grew from summer intern to part-time consultant for a nonprofit; provide year-round support and advise leadership on technology.
- Set up secure online payment processing for donations and transactions using Stripe, Square and PayPal.
- Run help desk support for 200 members and staff; maintain the office network, computers and devices, Microsoft 365 and Google Workspace accounts, and data backups that protect donor information.

Securitas — Somerset, NJ

Data Center Security Supervisor — Dec 2022 – Nov 2025

- Inspected server rooms, power areas, cooling, fire suppression and backup generators each shift, reporting equipment faults to maintenance; monitored CCTV and alarm systems.
- Supervised on-duty security staff, enforced access control and wrote incident reports for breaches, equipment failures and emergencies.

Harvard Protection Services — East Brunswick, NJ

Security Officer — Nov 2025 – Present

Earlier roles: Hub Driver / Sales Associate, AutoZone (2021–2022) · Sales Associate, Home Depot (2020–2021) · Cashier, Walmart (2019–2020) · Dietary Aide, Summer Hill Nursing Home (2018–2019)

SKILLS

Languages	Python, Swift, SQL, PHP, Java, C++, JavaScript, HTML/CSS, R
Frameworks & tools	FastAPI, SwiftUI, MapKit, NumPy/SciPy, PostgreSQL, MySQL, Docker, Git/GitHub, pytest
Systems	Distributed systems (Raft, replication, consistent hashing), Kalman filtering, REST APIs
IT	Networking, help desk, hardware setup, data backup, Microsoft 365, Google Workspace, Stripe/Square/PayPal
